

Facundo Luna

Backend Developer | Java + Spring Boot | REST APIs

facundolunaok@gmail.com | github.com/Facugl | linkedin.com/in/facundoluna

Santiago del Estero, Argentina | Open to Remote Work | English: Professional working proficiency

Professional Summary

Backend Developer with hands-on Java and Spring Boot experience through two production-grade personal projects and 4 months of remote, agile teamwork. Designed InventoryIQ, an inventory decision-support system using hexagonal architecture and Domain-Driven Design, and Banking System, a JWT/RBAC-secured backend with 35+ REST endpoints, ACID-compliant transactions, and 108 automated tests – including a real Spring Security audit that caught and fixed a username-enumeration vulnerability. Seeking a remote backend role building reliable, well-tested systems.

Technical Skills

Back-End: Java 17, Spring Boot 3, Spring Data JPA, Spring Security, Hibernate, REST APIs

Testing: JUnit 5, Mockito, MockMvc

Databases: MySQL, PostgreSQL

DevOps & Cloud: Docker, Docker Compose, Git, GitHub Actions (CI/CD), Render, AWS (EC2, RDS)

Front-End: HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, Material-UI

Personal Projects

InventoryIQ

Aug 2026 – Present

github.com/Facugl/inventoryiq

Inventory decision-support system converting sales and stock data into purchase recommendations, built with hexagonal architecture and Domain-Driven Design.

- Modeled core business rules (reorder point, safety stock, ABC/XYZ classification) as a pure domain layer, isolated from Spring, Postgres, and CSV infrastructure.
- Built a 9-screen React + TypeScript dashboard consuming a Spring Boot REST API documented with OpenAPI/Swagger.
- Persisted recommendation history in PostgreSQL and deployed the full stack to Render + Neon.
- *Technologies:* Java 17, Spring Boot, PostgreSQL, React, TypeScript, Docker, MapStruct, TanStack Query.

Banking System

Dec 2024 – Sep 2026

github.com/Facugl/banking_system | Live Demo

Backend system simulating financial operations using Java and Spring Boot.

- Designed and implemented 35+ REST endpoints for account management, financial transactions, and reporting.
- Audited Spring Security and fixed a username-enumeration bug and a JWT-filter crash, backed by 108 automated tests.
- Ensured ACID compliance with @Transactional, JWT authentication, and database-driven RBAC.
- Migrated CI/CD to GitHub Actions gating deploys on the test suite, auto-deploying to Render.
- *Technologies:* Java 17, Spring Boot, Spring Security, MySQL, Docker, GitHub Actions, JWT, Flyway.

Experience

Web Developer – No Country Tech (Remote Collaboration)

Mar 2023 – Jul 2023

Buenos Aires, Argentina

- Delivered 2 production features in agile sprints within a cross-functional remote team, collaborating via GitHub PRs, Scrum ceremonies, and Slack.
- Integrated REST APIs into a React frontend (fetch/axios, error handling, JWT-based protected routes), gaining early exposure to how backend contracts are consumed by real clients.

Education

Bachelor's Degree in Data Science

Expected 2030

Catholic University of Salta, Argentina
